PARTS BULLETIN

Here at Hi-Vac we use Band-It hose clamps on our 8" boom hose assemblies. They are strong and economical. However many of our customers do not have the special tool to install these clamps when replacing the boom hose. For this reason we have made available a "T-bolt" type clamp for easy field installation. All that is required for installation is a 7/16" socket or wrench. Boom hoses are double clamped on both ends and we recommend the same when using this clamp.

PART NO. A381225

Fits our 8" boom hoses

Also fits our part no. A191286 8" Closure Seal
