

# AQUATECH PARTS BULLETIN

This bulletin is being issued to help clear up some confusion over the 4-button pendant control use on the JV1000 series vacuum trailers. The early 4-button pendants (used up to about 1990) operated boom up, boom down, tank up, and tank down. The later 4-button pendants operated boom up, boom down, boom lock, and boom unlock. Adding to the confusion, the part number called out in the parts manuals for the early pendant was part no. 121965. Most illustrations for the part no. 121965 show a 4-button pendant, but the bill of material for this part number has two buttons and a toggle switch. Evidently there was a running change somewhere along the line. We have assigned part number 121026-1 to the early 4-button pendant. Both 4-button pendants are the same in appearance and consist of the same components, but the switches are wired differently.

OLDER STYLE  
PART NO. A122026-1

Pendant w/o cable: A380945

NEWER STYLE  
PART NO. A122026

Pendant w/o cable: N/A

*NOTE: Some early JV1000 series used a 2-button pendant (part no. 121964).*
