

# **AQUATECH**

## **PARTS BULLETIN**

This is an informational bulletin to help identify the hydraulic motors for reel pay-in/pay-out on standard SJR and B-Series machines.

**PART NO. A110185**

This motor fits most older units. There was a running change and earlier versions of the same part number had a round body. We still use this motor to operate the swivel bearing on "Pivart" reels and front mounted reels.

**PART NO. A110186**

This reel motor is used on older B3s that had the top suspended rear reel. This same motor is also used to drive the worm gear on the boom turret bearing & gear assembly.

**PART NO. A380464**

These reel motors feature relief valves to dampen the momentum when stopping the reel to prevent damage to the sprocket and chain. The A110211 (picture n/a) and A380464 are replaced by the A380839. The A380839 will also retrofit the above earlier style A110185. To order part number A380839 complete with JIC hydraulic hose fittings and mounting bracket, use part number A110159-1.
