

AQUATECH PARTS BULLETIN

Since the late 90s, Aquatech has used control panels with NEMA type enclosures. From time to time we get calls for a replacement lock and/or key. The company that supplies us with our panels have, over the years, sourced the enclosures from different manufacturers - therefore the style of locks have changed. Please use the information below to determine which lock you have.

The oldest style lock was made by Rittal. The two features that identifies this lock is the square bezel on the outside of the door and the square lock body held in place by a retainer clip on the inside. The part number for this lock is A381533.

The next style of lock we encountered was made by EMKA. The EMKA lock has a small black face on the outside and is held into the door by a large flat retaining nut. The part number for this lock is A381538.

Recently we started receiving panels with Hoffman locks. The Hoffman lock is held in place by two pal nuts and features a chrome face on the outside. At the time of this printing we have not had any calls for this lock and have not issued a part number for it.

Fortunately the key is the same for all the above locks. The part number is A239443.
