

AQUATECH PARTS BULLETIN

Bulletin No. AQPB-153

Issued: 10/17/09 by RR - Revised 05/24/10

Subject: B-Series Standard Silencer

File In Vacuum Section

The blower silencer used by the old Aquatech company on the standard B-Series machines in the early 90s was different from the current design and is not available from Hi-Vac Corp (Aquatech Inc. sourced this and we do not have the drawings to build it). The current silencer will not fit for following reasons:

- The old design sat upon a platform and is supported by "fins" on the bottom. The current design is suspended between mounting brackets (see below).
- The older design's inlet was higher up the side of the silencer.
- The old design was coupled to the blower by a rubber sleeve, whereas now the silencer bolts directly to the blower.
- The flange on the current design accomodates the Roots 624 blower. The older design was used mainly with Robuschi blowers.
