

PARTS BULLETIN

The O'Brien part number J-2407A 1" 3-Way Ball Valve has been replaced by part number A130920 which is the same size ball valve used on our Aquatech product line. The 3/4" and 1" 3-way Aquatech ball valves come equipped with an offset handle. If the application requires a straight handle you must specify that you need a straight handle when ordering a replacement ball valve assembly. O'Brien 7000 series trailer jettors and the model 3518 trailer jettor have a slot in their control panels for the lever and all require the straight handle. Also the older 3000 series trailer jettors are all believed to have had the straight handle as well.
